Brief Historical Facts on burial-mounds

Alexandropol Kurgan before excavation 1852

A burial-mound or tumulus (plural tumuli, from the Latin word for mound or small hill, from the root **"tum"**- "to bulge, swell" also found in tumor and cognate with English thumb) is an artificial hill of earth and stones raised over a grave or graves. Tumuli are also known as barrows (in England), cairns - composed largely or entirely of stones (in Scotland), or kurgans (in Eastern Europe, Central Asia and India), and can be found throughout much of the world.
